

Banking Frequently Asked Questions

A savings account allows customers to deposit money, earn interest, and withdraw funds while following the bank's transaction rules.

To open a standard savings account, customers usually need Aadhaar or another government ID, PAN, address proof, and a recent passport-size photograph.

Banks may ask for an initial deposit amount depending on product type, branch policy, and account category.

Customers who want to check account balance can use mobile banking, internet banking, ATMs, passbook updates, SMS banking, or call official customer care after verification.

Customers can link Aadhaar and PAN to their bank account by visiting the branch, using internet banking if the bank supports it, or submitting a service request with identity details and account verification.

If Aadhaar and PAN are not linked correctly, customers should verify name matching, date of birth, and KYC details, then contact the branch or customer support for correction.

Before discussing account details such as registered mobile number, branch, account status, or last transactions, the bank should verify the customer using secure authentication steps.

If a customer asks for sensitive account information in chat, the safe response is to guide them to logged-in banking channels or branch support instead of exposing private data directly.

If a debit card is lost, customers should block the card immediately through mobile banking, internet banking, customer care, or the branch.

ATM cash withdrawal limits and daily transfer limits vary by bank and account profile.
