

RBI Customer Awareness and Safe Banking Guidance

Customers should never share OTPs, ATM PINs, CVV numbers, or internet banking passwords with anyone, including someone claiming to be from the bank.

Before using an ATM, customers should inspect the keypad, card slot, and surrounding area for suspicious devices that could indicate skimming.

Suspicious digital payment or account activity should be reported immediately to the bank's fraud helpline and to the cybercrime reporting system.

Banks should follow customer due diligence and KYC practices to verify identity, address, and risk indicators at onboarding and during periodic updates.

Account opening and service changes may require re-validation of customer information when there is a mismatch or expired documentation.
